Course Faculty	Dr. B .SHYAMALA GOWRI
Reg. No.	192324164
Student Name	Sweety Roselin A
Date	06/08/2026

LAB PROGRAMS 15 AND 16

Program 15

Question: Keep rows with at least two NaN values.

Aim: To implement the given Pandas program successfully.

Dataset :

Random DataFrame (10 x 4) generated using NumPy.

Code

```
import pandas as pd, numpy as np
df=pd.DataFrame({'A':[1,np.nan,np.nan],'B':[np.nan,np.nan,3]})
print(df[df.isnull().sum(axis=1)>=2])
```

Output

Rows with >=2 NaN.

```
import pandas as pd, numpy as np
df=pd.DataFrame({'A':[1,np.nan,np.nan],'B':[np.nan,np.nan,3]})
print(df[df.isnull().sum(axis=1)>=2])
```

	A	B
1	NaN	NaN

Result

Thus, the program was executed successfully and the expected output was obtained.

Program 16

Question: Split dataframe into groups based on school code and check GroupBy type.

Aim: To implement the given Pandas program successfully.

Dataset :

%%writefile school.csv

School_Code,Class,Student,Age,Marks

S101,10,Asha,15,470

S101,10,Ravi,16,455

S101,9,Priya,14,440

S102,10,John,15,460

S102,9,Mary,14,430

S102,9,David,15,445

S103,8,Kiran,13,410

S103,8,Riya,14,425

S103,9,Arun,15,450

S103,10,Sneha,16,480

Code

```
import pandas as pd
df=pd.read_csv('school.csv')
g=df.groupby('School_Code')
print(type(g))
```

Output

```
[3] ✓ 0s import pandas as pd
df=pd.read_csv('school.csv')
g=df.groupby('School_Code')
print(type(g))

... <class 'pandas.core.groupby.generic.DataFrameGroupBy'>
```

Result

Thus, the program was executed successfully and the expected output was obtained.
